WASHINGTON, DC - BlackBox Partners won a contract with the The Advisory Board Company to provide Oracle Database and Data Warehousing support for the ongoing Compass Solutions business intelligence projects.

BlackBox Partners brings a wealth of experience implementing Oracle database solutions in Data Warehousing environments. Our staff will be augmenting the development team as it gears up for implementation of Phase 2 of the Surgery Compass solution. We will provide overall database administration support, consult on best practices for integrating the Informatica ETL operations to the database, and build a workable configuration management system for the oracle database objects.

The Advisory Board Company's "Compass" solutions provide hospitals with better insight into their unique business, elevating their performance through better, faster, data-driven decision making. At the heart of each Compass solution is a business intelligence tool that allows hospital executives and Advisory Board staff to easily view and analyze each organization's own financial, operational and clinical data. Current solutions exist for Spending analysis, Surgery analysis and Nursing staff analysis. For more about the company, please see <http://www.advisory.com>
